

Delphos City Schools Business Partnership App as of 12/1/15

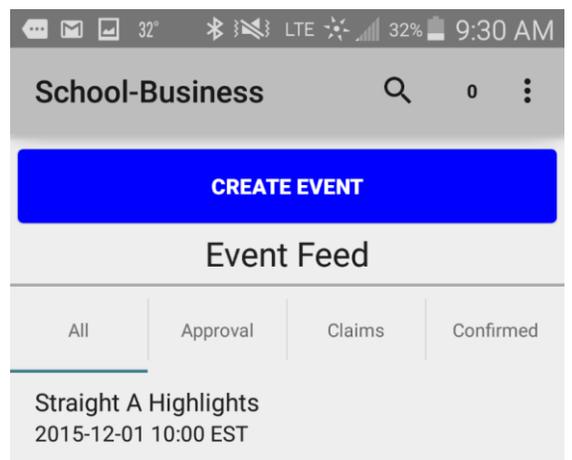

Name: STACC (Students, Teachers and Community Connecting)

Ohio State University's Center for Enterprise Transformation and Innovation received \$139,589 in partnership with Delphos City Schools to build an Android and Apple IOS School Business Partnership App

OSU's CETI is currently behind scheduled according to original project timelines. The Android version is ready for release on Google Play and as contracted, they will begin Apple IOS version in 2016. Delphos City Schools held Google Hangout sessions and conference calls with CETI throughout development phase 2014-to current. Delphos City Schools held School Business Summit in May, 2015 where CETI spoke to DCS students on the development of the app and was featured on local news stations. Delphos City Schools students downloaded the app to test features on Android phones in fall of 2015.

Delphos City Schools proposed adding an additional feature from original design that would allow users to use a geolocation to add event and create a searchable database. Our Career Connections Student Center will be the 1st location setup in the app.

Current Screen Shots of Apple from Android phone

New searchable Location Feature highlighting CCSC events saved to database
